Bill Viancourt ABC# 132 BCCA 18288 Hello fellow CANnoisseurs! Well lucky for us, the bottles keep coming. Although they have slowed to a trickle, we still get to add more to our collections.

In this issue, as promised, we restart our "My Collection" columns which are dedicated to the

In this issue, as promised, we restart our "My Collection" columns which are dedicated to the collections of fellow members. We have two this issue, Bruce Woolley's #070 and Csaba Elekes's #184. Bruce hails from Canandaigua, New York and Csaba from Budapest, Hungary. Although worlds away, they both love collecting cabottles as well as trading amongst other members. As you'll notice cabottles make up a pretty sizeable part of their collections. I want to personally thank them for submitting their articles and allowing us to view their collections. We have even more promised for next issue.

Below is a photo of the bottles I've added to my collection since the last issue. I aquired most of them though trades although I purchased a couple of the foreign bottles online. Both of the Heineken bottles are black light bottles. I now have 63 foreign bottles in my collection, and am always looking for more.

It appears we've taken a pretty big hit in membership renewal. I believe the last count was over 20 members who did not renew their ABC membership this year. All of those members have been removed from the current roster and are no longer included in the email distributions. We did

have a huge renewal push over the last couple months, which most of you remember from all the emails and postings on the forum. If you notice a name missing from the roster and you know they must have been in a cave or something, give them a call and remind them to get back on board. I haven't received any feedback from anyone as to why they have chosen not to renew.

Your ABC Board of Directors have decided that it is not cost effective to send out hard copies of the newsletter any longer. The costs involved were simply not covered by the additional fees involved, and we do not believe the chapter should incur these costs. Check page 2 for more information.

As you all know, we raffled off a <u>BUD LIGHT BLACK LIGHT "2006 HAPPY NEW YEAR'S"</u> <u>BOTTLE</u>, back in December. The lucky winner was Dave Vogl #174 from DeKalb, IL. Congrats again Dave, I'm sure this made a great addition to your collection.

Until next time, enjoy the Newsletter!

PAGE 2 VOLUME 5 NUMBER I

Snail Mail Ending

On Jan 1st the following motion was made by Brad Ambruso:

Change ABC Chapter By-Law section 8.a. to read from:

The Chapter shall publish a quarterly newsletter which will be available to all members via the internet. Those not having internet capabilities will be required to purchase the newsletters at a set price of a) \$10 per year for North American members or b) an amount to cover actual mailing costs to the country of delivery for members outside North America. The Board may also authorize and publish additional materials designed to promote our hobby and increase membership.

To

The Chapter shall publish a quarterly newsletter which will be available to all members via the internet. The Board may also authorize and publish additional materials designed to promote our hobby and increase membership.

The motion was seconded by Joe Hobaugh and passed with 6 yes votes and 1 abstention.

In a nutshell this means the ABC Chapter is no longer bound to print and mail hard copies of the newsletter. At CANvention we had discussed and even approved the purchase of a printer. But since almost half of the current hard copy mail (snail mail) members didn't renew, that idea has been shelved and we decided to move the club completely into the 21st century.

The last hard copy edition for the members still receiving them will be Vol 5 No 3, the Aug-Oct 2011 edition. Other action items accompanying this motion are:

Absolutely no new (or rejoin) snail mail applications will be accepted, including recent members not renewing. The current application and website page will be edited to denote the change.

The current snail mailers will be given a free year of dues and credited for any payments made past the 2011 renewal cycle (if they decide to stay on and have email/internet capabilities).

The decision to end hard copy mailings was not made hastily and will end a tradition with your editor. It was decided that the club has to move forward and with the constant rising mail costs and the extra time it takes to prepare the hard copies, it was no longer cost efficient.

We, by no means, meant to exclude or alienate any of our current snail mail members. As we said it was a very hard decision and we sincerely hope that those members currently without email/internet access can find a way to stay with us. There are many ways to get online these days and once those members do, we're sure that you'll not only enjoy the ease and convenience of 'soft' copies, but you'll wonder why you waited and have been missing all the website and forum perks the ABC has to offer.

FLASQ is First U.S.Wine to Adopt Aluminum Bottles

FLASQ, a product of St. Helena, Calif.-based JT Wines, has become the first domestic wine to be sold in quick-chilling, 100 percent recyclable aluminum bottles.

Now en route to wine retailers, sports venues, resorts, and restaurants across 20 states, FLASQ's Chardonnay and Merlot varietals are being packaged in 375-ml "demi" aluminum bottles supplied by Exal Corporation.

JT Wines says it is gearing FLASQ to "Millennials, Generation Xers, and Baby Boomers with active lifestyles who desire convenient and portable packaging—all with a modern flair."

"As a third-generation Napa Valley resident, I believe FLASQ is a long-awaited innovation introducing premium wines to a new audience, and into venues where wine sales were previously hindered," said Tim McDonald, co-founder and CEO of JT Wines. "With the convenience of quick-chilling, portable and shatter-proof materials, coated aluminum bottles spoke loud and clear to us. As we launch with distribution in 20 states—and several more on deck—consumers, retailers, hoteliers and food service providers will benefit from this unique product, and the fun lifestyle it represents."

continued from page 2

In its press materials, JT Wines heavily touts aluminum's versatility as a packaging material for both the consumer and producer, noting that aluminum chills five times faster than glass bottles and stays cold longer; offers shatter-proof packaging; and preserves taste from barrel through to consumption.

The vintner also emphasizes its environmental stewardship, stating that the aluminum bottles and screw caps were chosen for the FLASQ product line in part because they are 100 percent recyclable. In the U.S., aluminum cans are recycled at over twice the rate compared to plastic and glass packaging, JT Wines notes. "Additionally, compared to glass, the carbon footprint of aluminum bottles is reduced by 35 percent due to a lighter case weight in shipping," the company says.

For the launch, JT Wines published an "environmental stewardship document" among its press materials, handily summarizing aluminum's advantages as a packaging material. The document reads, in part:

"Over the last few years, JT Wines—parent company of FLASQ Wines—has been seeking new wine packaging options embracing greater convenience, portability and socially responsible materials. Upon researching various concepts, JT Wines found the environmental solution in aluminum for both its bottles and caps.

Aluminum has many Earth-friendly attributes:

- Aluminum is a durable and sustainable metal: Two-thirds of the aluminum ever produced is still in use today.
- Recovering aluminum for recycling saves money and dramatically reduces energy consumption. The aluminum container recycling process saves 92 percent of the energy needed to produce aluminum from bauxite ore, according to EPA's Waste ReductionModel (WARM).
- Most of the rigid aluminum packaging recovered from the waste stream is used to manufacture new packaging, making aluminum packaging a closed loop recycled material.
- Of the most common recyclable materials aluminum, glass, paper, metals, corrugated paperboard and plastics, aluminum is the only material infinitely recyclable, 100 percent recyclable, and pays for itself.
- Around the U.S., aluminum is recycled 50 percent of the time, compared to glass and plastic, which are reprocessed less than 25 percent.
- Aluminum is significantly lighter than glass; therefore, it creates a 35 percent reduction in its carbon footprint during shipping.
- Aluminum does not degrade or lose any if its intrinsic physical properties during the recycling process. Recycled aluminum and virgin aluminum are inherently the same.
- Aluminum beverage containers represent less than 20 percent of the materials collected in curbside recycling programs, and they generate up to 70 percent of total scrap value.
- Aluminum cans are the most valuable commodity to curbside programs helping to pay for the collection of containers made from other materials.
- Aluminum is the only recyclable material municipalities can count on to recoup their recycling costs. According to Earth911.com, each year the aluminum industry pays \$800 million for empty aluminum cans to the benefit of communities, industry and the environment.
- Aluminum packaging provides a complete, impermeable barrier. The superior barrier properties, of aluminum packaging, protect the integrity and improve the shelf life of sensitive products, in a highly sustainable manner."

PAGE 4 VOLUME 5 NUMBER I

My Collection

Csaba Elkes ABC# 184

My name is Csaba Elekes. I live in Budapest, Hungary. I have been collecting aluminum bottles since 2009. I collect items from all over the world in any type and size. I have more than 450 different bottles in my collection.

Why bottles? I had been collecting cans for 25 years, between 1984 and 2009. At the beginning, I was interested in every kind of metal containers regardless of size. I had a huge stock of sodas with many special issues of Coke, Pepsi, Schweppes and other brands. After a few exciting years I decided to stop collecting non-beer cans. At that point I had over 3,000 different soda items and a few special types of beer cans including: Hungarian, German half liter, commemorative half liter, OC/OC (One Can One Country) cans and the sets. In 2009, I got two aluminum bottles from Spain (photo to the right). I had been thinking for several years about collecting a brand new item as it can be very exciting to start collecting something from the beginning.

I got to know many other collectors mainly from the US and Spain. Last year I joined ABC and BCCA. I am always working on my web page where you can find my entire collection, wanted/trading lists and the latest issues. I prefer trading bottles but sometimes I buy or sell them. Unfortunately aluminum bottles are very rare in Hungary.

Please look at my web page (<u>www.beercan.hu</u>) where you can find every important information on me (e-mail: pocokcan@gmail.com).

My Collection, part 2

Bruce Woolley ABC# 070

I started collecting cans in the 1970's and when I filled all my shelves, plus 100 cases, it was time to regroup. Now I have narrowed the collecting down to New York cans/breweriana and Anheuser-Busch aluminum bottles.

It has taken me 5 years to unload all the unimportant cans I no longer collect and I am down to just six cases.

I always enjoy the CANventions as it's great to see everyone and have a 'Cold One'. Look me up at Covington this year and let's do a little trading.

PAGE 6 VOLUME 5 NUMBER I

What's New

Jerome Spindler ABC# 006

After several false alarms and even photos of a couple potential new Coors bottles, nothing special really materialized. We had hoped to see a Pacers and Rockies bottle at a minimum, but ended up with the usual Coors Light Super Bowl. It is a real similar design to all the cans we've seen over the years. Commemorates Super Bowl 45 with the NFL logo on one side and Lombardi trophy on the other. Non-redemption 16 oz, can number 838489.

Miller Lite slowed down a little, which gives us time to catch up. The Boston Celtics '2010-2011 Season' bottle kind of snuck onto the market. It came out at the same time as the Bud Light Bruins bottle and is so far, the only new release for Miller this winter. Can number 838413, 16 oz redemption.

Aluminum Soda Bottles Joe Prin ABC# 011

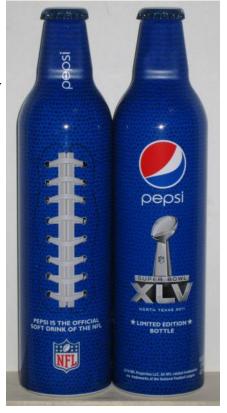

Things always seem to be a little slow on the U.S. Soda bottle releases. Mountain Dew has dropped out of sight and everyone else seems to be taking a hiatus.

Pepsi did surprise everyone with a commemorative Super Bowl 45 bottle. First time they've done one for the Super Bowl and after they did a couple for the baseball All-Star game, maybe they are testing the waters for a wider release later. One can speculate and hope, but even if they just dabble in a new one from time to time it's still a very welcome addition.

The Website needs your help/input

The U.S. and Foreign Soda bottle listing are in need of, for lack of a better word, participants. The U.S. bottle listing will be getting an upload of Dews and Pepsi's soon to help bring it up to speed.

The Foreign Soda bottles could use a serious influx. If you have a bunch of foreign soda bottles and can provide photos and information on them, please help out. Please email anything you can help with to webmaster@abcchapter.com and I'll get them formatted and posted in the listings.

Foreign Bottles

Juan Carlos De Marco ABC# 031

Once again I've been looking for new bottles that offer beautiful surprises and new challenges. Logically I will not be presenting ALL the cabottles that have appeared, as I may be unaware of a few. In that case, I hope you can send me pictures and information of those I missed so they can be incorporated in the international catalog and our website. I would also like to acknowledge our colleague Csaba Elekes, from Budapest, Hungary, who provided several images that are used below.

As usual, JAPAN is at the forefront of production of these beauties, so here are a few new examples, Left to Right:

JP Kolsch 250: a look of bottles and used without further pictures and simple paper labels. A classic.

Special Lager Kirin Light, 15.2 oz. screw cap, named "Bottle-Can."

Kirin Ichiban, also in 15.2 oz, which is already becoming the preferred size of the Nipponese. (Japanese)

Suntory Magnum Dry 415, 14 oz. This brand does not produce too many variations, but when they do, their products are super attractive

A bailout: Asahi IBAF 2007, Asian Championship slim bottle, a rare but usually content for Asahi, 11.8 oz.

Asahi 20 Anniversary: Also 2007, and 11.8. Both were "sleepers" but we have discovered them.

Asahi Super Dry 2010, replacing the old popular cosmetic 11.8, but always sober and distinguished.

Sapporo fine lager version 15.2, as most of their cabottles. It was the first to launch this style to market, quickly copied by competitors from other brands.

Sapporo Bottle Shot: "A refreshing brew to brighten your day" as the slogan of the brand.

Asahi three stars: Also a style that has given great satisfaction to their creators, the two-liter, already adopted by Japanese consumers. (photo below Kolsch)

FRANCE: Refined style, elegance and professional design qualities cabottles ORA ITO for their Heineken 2010 Iconik produced by Enterprises SAS. 11.2 oz. But Heineken didn't stop with this one, they threw in a beautiful "twist bottle" with another look but the same aesthetic quality. Desperados Beer flavored with Tequila, is another regular appearances in France, produced by Brasserie Fischer, and in 11.2 oz. An rarity of France is "Guran Sedania"

Beer", which is also 11.2 oz is known as "Biere de Sedan" and is an absolute novelty.

 $continued,\,page\;8$

continued from page 7

SOUTH AFRICA: After the appearance of the first three cabottles in the history of this emerging nation commemorating the World Cup soccer, Castle released another fantastic series of three, keeping its traditional gold and red colors: Proteas Test Team, batsman, bowler and wicket-keeper, all of 13.5 oz.

TAIWAN AND HONG KONG: Heineken chose Southeast Asia for a special release, a Black Light Bottle STR, special edition for Taiwan and Hong Kong, 11.2 oz. has caused a sensation. A similar version also appeared in the United States in 16oz.

GUATEMALA: Gallo is the name of the most popular beer in Guatemala. So it was not surprising, that for the first time, this brewery surprised the customers with this beautiful cabottle, 472 ml.

SPAIN: Islander, following the success of its first edition, returns to the fray with a new bottle, similar to the previous, but with different wording and cosmetics. "The Taste of Ibiza" was the phrase in 2009, now it's "The Beer of Ibiza", also in 11.2 oz. Also in the same size, "Liga" from San Miguel continues to show a permanent presence in the Spanish market, making us all very grateful.

watches.

DOMINICA: Now small countries also accept the challenge and Kubuli, with this year's 8.5 oz. and beautiful design, captivates and traps all kind of collectors worldwide.

What's New in A-B?!

Brad Ambruso ABC# 007

Anheuser-Busch releases have been few and far between, so when a new one arrives or a sleeper is found, it's always refreshing.

Bud Light snuck in a bottle for the Boston Bruins. It is so far, the only A–B bottle released for the NHL. Can't really think of a reason why the Bruins get the only bottle, unless it's some kind of local promotional thing since Miller also released a bottle for the Celtics, also the only release they have this winter.

A Budweiser sleeper 'Error' bottle has just recently surfaced. The Budweiser 'NY Mets Shea Stadium' bottle 501236 has a number misprint of 501238 (same as the paired Bud Light). Pretty strange it took us two years to find this one, check your traders!

An even older sleeper has finally been discovered and is a 'Sticker' export to the UK. This is similar to the Bud 500153 export that was discovered a few years ago. This

version is a Budweiser 500357 with the small sticker over the bottom front and a larger sticker on the back with all the UK

mandatory info. As with any export/sticker variation, just depends on what you collect.

A couple of Bud Light 'Baseball' prototypes showed up on eBay and went for some crazy price (at least too rich for me). Little help here if anyone knows who got them, I would like better photos and the particulars to include them on the webpage and feature here later.

Budweiser UK Export 500357 (Sticker) 16oz n/r

Bud Light Boston Bruins 501661 16oz redemption

Moveable Shelving

Joe Prin ABC# 011

The following directions for moveable shelves are geared toward cans but can be easily modified to aluminum bottles (or any size can) by changing the shelf spacing. These can be built in 7' and 8' wide sections so that they will nest together and take up less floor space. Once I get a section built for aluminum bottles, I will have a follow-up photo posted.

MATERIAL LIST- For one 8' roll-a-round she	lving unit
2 sheets of 7/16 OSB	\$18
5–2x4x8 framing lumber	\$16
4– 1 1/2" swivel casters	\$8
12 pc.– 1x4x8 MDF	\$48
48–5" #10 Torx30 Lag Screws	\$12
Nails, screws, or Air nailer and stapler.	<u>\$5</u>
(Eagle Idaho Lumber Cost 10-12-2010) Total	\$107

PAGE IO VOLUME 5 NUMBER I

continued from page 9

With two of the 8' 2x4's, add in three 45" pieces. One on each end and one in the middle. Predrill and screw or nail. I have an air nailer and stapler, so it is pretty easy and quick with these tools. If you go with the screws, which I did on one, use 2 1/2" deck type screws for the 2x4 connections and 1 5/8" screws to attach the OSB to the frame.

Install the sheathing on both sides of the frame. Here is when you square up the frame by attaching the sheet to one long side first, then the short. Complete the other two sides and attach to the middle stringer. VERY strong, and not overly heavy. You could paint this assembly at any time I suppose. I figure if it is covered with cans, I can't see much of it anyway!

Add a 2' piece of 2x4 to the bottom of the frame. I used some Gorilla glue and 4 nails. Or screws. The four 12" angle braces (long to long) are then placed to square up the frame on the legs. Screw or nail these into the rim lumber and the caster base. Install the four casters with screws and then flip it all over and upright. They are amazingly sturdy and stable.

The MDF Shelving is next. Pre drill holes through the edges with a 5/16" auger bit on a drill. I found that the auger bits, because they self feed, and because MDF has a center line core that kind of opens as you go, the bit follows straight and true through the edge with out popping out the front or back. I clamp the 6 boards (one side of the shelving rack) together to hold them upright. Ream with a countersink bit.

Here are the 5" screws. They require a #30 Torx tip for your drill. Go slow as you put them into the OSB, and don't try to set them too deep or you will split the MDF. Start at the bottom with a shelf cut to 95" to fit in-between the angle braces but on top of the caster base. I used 7" spacer blocks and worked my way up.

Here you can see how a 7' rack and an 8' rack nest together for storage. Hope this gives you some ideas!
